

Estimated topic prevalence over time

Highlighted lines indicate topics with the strongest positive recent slope

T1. Phylogenomics, taxonomy and evolutionary relationships

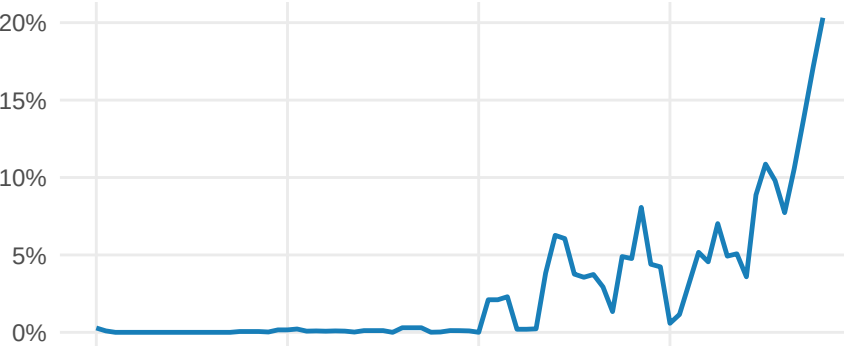

T2. Symbiotic bacteria and probiotics

T3. Viral pathogens, floral resources and metabarcoding

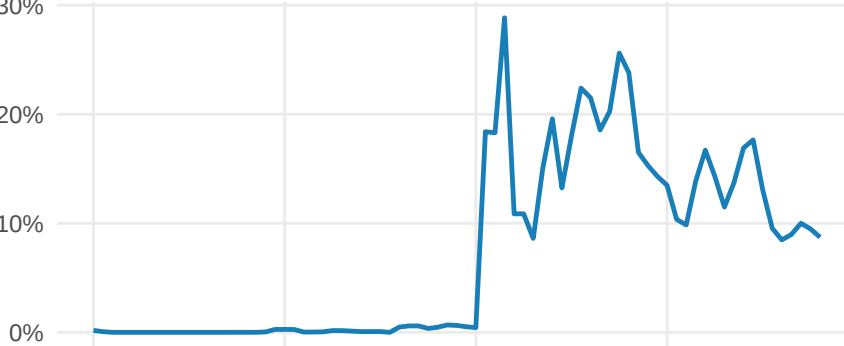

T4. Mitogenomics and mitochondrial genome evolution

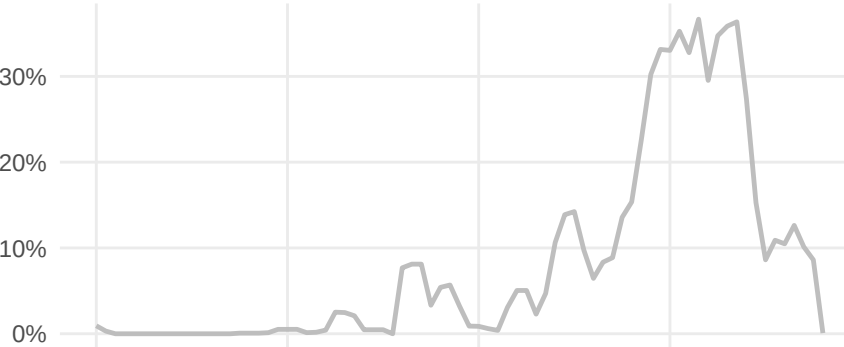

T5. Cytogenetics, karyotypes and chromosome architecture

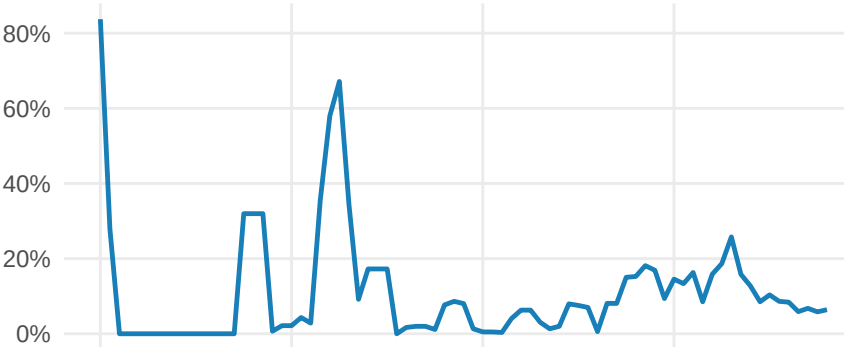

T6. mtDNA/COI marker assays and DNA barcoding

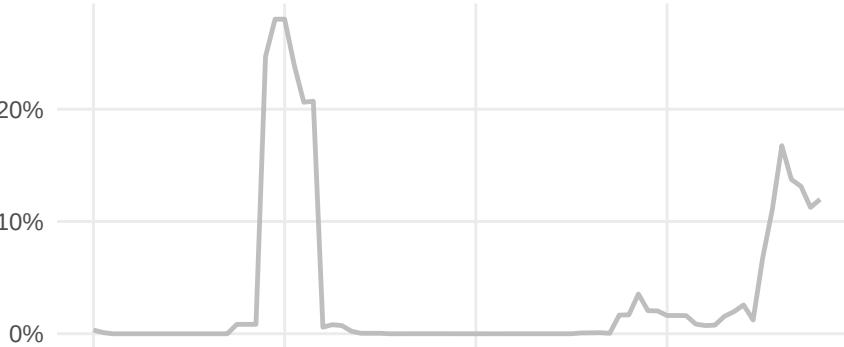

T7. Population genetics, microsatellites and morphometrics

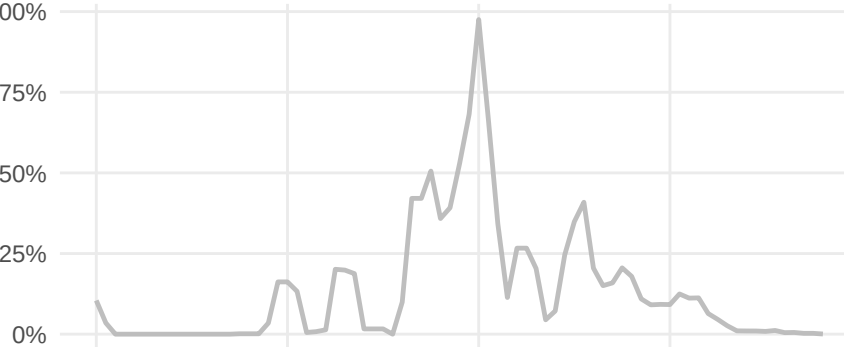

T8. Gene expression, caste differentiation and reproductive genetics

T9. Gut microbiome, detoxification and exposure responses

T10. Allozyme, RAPD and enzyme polymorphism markers

Publication year
